

Urinary Catheter Support Group

The Catheter Support Group brings people together to share new information on catheters and catheter accessories and gain practical advice on solving catheter management problems or intermittent catheters. Those caring for somebody with a catheter are also welcome. For further information, contact the Continence Service on 01372 38 4346.

The group is chaired by patients. A nominated clinician attends the meeting by invitation. Guest speakers are invited to speak on topics by group members. It meets quarterly and new members are always welcome.

For individuals unable to attend meetings their views can be contributed in writing or by email. Where individuals have visual impairment and use reading aids, correspondence can be sent in larger size font to enable digital scanning and reading.
